

NOW YOU'RE IN CHARGE

The Plight of the Individual Investor

It has long been known that individual investors do not typically fare well in their efforts at do-it-yourself investing. This notion has been validated by numerous studies, including one by Dalbar, Inc., which revealed the staggering margin by which the average individual investor trails the returns of the broader market.

As the chart shows, the study revealed the S&P 500* returned 9.85% while equity investor's return over that same period was a paltry 5.19%, a difference of 4.66% annually.

The average fixed income investor fared no better over the same period, achieving 0.80% annual while the Barclays Aggregate Bond Index* averaged 6.20%, a difference of 5.40% annually.

Why is the individual investor so inept at capturing the returns of the market? In a word: Emotions.

Emotion drives investors to buy the latest hot investment near its peak and sell the investment after riding it to the bottom on its inevitable slide downward. The "buy high, sell low" scenario is unfortunately not just an anecdote, but is very real for many individual investors.

The end result is simple. Buying on greed and selling on fear might satisfy short term emotional needs, but the lack of discipline may compromise long-term objectives.

Are You a Prudent Saver?

Do you have the time, training and temperament to make good decisions? The vast majority of participants in a company retirement plan do not pay the needed amount of attention to their initial investment selection. Moreover, statistics show plan participants rarely revisit their choices over time as their objectives change and markets evolve.¹

The Self-Directed Brokerage Account (SDBA)

Over the past few years many employers have enhanced their retirement plans to include a brokerage window opportunity so that plan participants have more choice and greater flexibility with their retirement investments. This option, known as the Self Directed Brokerage Account (SDBA), exists in 401(k), 403(b) and 457 plans where participants will have access to professional management, stocks, bonds, mutual funds, and ETFs.

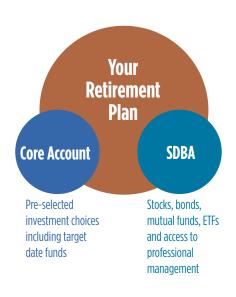

How it Works

Plans that offer the SDBA option provide the opportunity for employees to take full control of a portion of their current retirement account by linking it to the existing Core account. In doing so, participants expand the range of investment choices beyond the Core investments and will have access to the same management style as High Net worth Investors, Institutions and Foundations.

The Core account refers to the retirement account through the employer that offers limited, pre-selected investment choices. The SDBA is very similar to traditional brokerage accounts which exists as an eligible option on retirement plans. Employers that offer the SDBA option allow the employees to transfer a portion of their investments from the Core account to SDBA. Through this account employees have access to investment choices such as mutual funds, stocks, bonds and access to professional investment advice through a Registered Investment Advisor.

SDBAs are currently the most underutilized investment options in 401(k), 403(b) and 457 accounts. However, this option should be used by investors who feel comfortable managing their own risk or are working with a professional Investment Advisor.

Additional costs incurred by participants, if any, can vary from one SDBA provider to another. For additional information on your plan options and costs, please contact your HR department or your Investment Advisor.

The SDBA or a "brokerage window" is a choice on eligible plans that offers investment choices such as mutual funds, stocks, bonds, and access to fiduciary investment advice through a registered investment advisor.

†Dalbar's 21st Annual Quantitative Analysis of Investor Behavior 2015: Average equity investor and average bond investor performance results are calculated using data supplied by the Investment company Institute. Investor returns are represented by the change in total mutual fund assets after excluding sales, redemptions and exchanges. This method of calculation captures realized and unrealized capital gains, dividends, interest, trading costs, sales charges, fees and any other costs.

*The Standard & Poor's 500 Index and the Barclays Aggregate Bond Index are unmanaged groups of securities considered to be representative of the stock market and bond market in general. Indexes are unmanaged and cannot be invested into directly. Past performance is no guarantee of future results.

ADVICE MATTERS

Recent studies emphasize the importance of client-advisor conversations. These reports prove that advisors can add 3% to clients' net returns¹ and retirement savers who sought investing advice enjoyed a median annual return almost 3% higher than those who didn't – even after the fees they paid for that advice².

Target Date Funds vs Personal Advice

Target Date Funds (TDFs) shift investors from stocks to bonds over time in an effort to become more conservative as retirement approaches. This transition is referred to as a "glide path" and while the basic concept seems reasonable, TDFs are widely criticized for the limits of their mass market approach. TDFs cannot incorporate all the relevant personal facts that determine the ideal allocation for one's retirement investments, and investors can find themselves either forfeiting needed growth or accepting unnecessary exposure to an increasingly volatile market.

By definition, a TDF is a fund of fund model that invests predominantly or exclusively in mutual funds with a certain maturity or specified date in mind, typically the time at which a participant is planning on retiring. Because TDFs are designed to change their allocation and objectives over time, it is important for investors to revisit their investment selection periodically to make sure that the investment selected is consistent with their goals and objectives. TDFs are not guaranteed and past performance does not guarantee future results.

Don't settle for a generic TDF that was designed for millions of participants when you can determine and create your personal retirement date portfolio. With advice from the advisor you trust, you can have comprehensive investment management and cohesive financial planning in your company retirement plan.

Don't let Wall Street determine *your* future. Take back control of your retirement.

WITH ADVICE

ADVISORS CAN ADD VALUE1:

- As effective behavioral coaches (up to 1.5%)
- Applying asset allocation strategy (up to 0.75%)
- Employing cost effective investments (up to 0.45%)
- Managing allocations and rebalancing (up to 0.35%)
- Managing a spending strategy (up to 0.70%)

WITHOUT ADVICE

Portfolios of people who didn't get help suffered from²:

- Inappropriate risk levels
- Market timing mistakes
- Misunderstanding risks and market volatility
